

Harjot Singh Gill

Chandigarh, India • harjotsinghgill007@gmail.com • linkedin.com/in/harjotsinghgill007

Summary

Full-Stack Engineer with nearly 3 years of experience building production web applications and blockchain-integrated internal platforms using TypeScript, Node.js, React, Next.js, and advanced Web3 tooling. Proven expertise in cross-chain architecture, integrating smart contracts with backend services, and shipping maintainable DeFi products. Deeply experienced with LayerZero integrations, DEX backends, OTC settlement flows, and EVM/Solana ecosystem bridging to deliver secure, institutional-grade infrastructure.

Experience

Associate Software Engineer

Chandigarh / Remote

Redbelly Network

Jan 2023 – present

- Architected and deployed a cross-chain bridging solution using LayerZero V2, successfully wiring RBNT OFT across an EVM-7 mesh and Solana mainnet.
- Designed and engineered a Uniswap-compatible DEX backend from scratch, delivering robust swap, liquidity APIs, and V3 specifications.
- Built an end-to-end Airswap OTC RFQ pathway and an on-chain order book leveraging Firestore, SIWE (Sign-In With Ethereum) authentication, and smart contract settlement.
- Led infrastructure hardening post-industry incident by auditing and re-verifying 72 directed LayerZero DVN pathways across 9 chains to ensure bridging security.
- Authored and maintained a versioned AI-assisted coding ruleset (`redbelly-cursor-rules`), driving standardization and prompt productivity across the engineering team.
- Evaluated and integrated critical Web3 infrastructure, including Oracle networks (Chronicle, Stork) and custom Hummingbot PMM strategies for automated market making.
- Deployed native Solana programs using Anchor, managing cross-ecosystem capabilities and upgrade-authority transfers.
- Designed and extended backend APIs for internal tools involving smart contract integrations, KYC verification flows, and verifiable credential workflows.
- Built GitHub Actions pipelines for automated testing and environment-specific deployments, achieving 70%+ test coverage across key workflows with Jest and Playwright.
- Maintained production-grade full-stack applications and PostgreSQL data models using TypeScript, Node.js, Next.js, and TypeORM.

Projects

Automated Job Aggregation and Alerting System

- **Tech Stack:** Python, FastAPI, Supabase, GitHub Actions
- Built a backend system to collect, filter, and persist job listings from 5+ platforms while respecting robots.txt and rate limits.
- Implemented keyword-based filtering, scheduled execution, and alert delivery workflows with a focus on reliability and maintainability.
- Automated daily runs using cron and GitHub Actions, reducing manual effort and improving consistency of outbound alerts.

AI-Powered Resume Optimization Tool

- **Tech Stack:** FastAPI, React, LLM Embeddings
- Developed a full-stack application with a FastAPI backend and React frontend to tailor resume content against target job descriptions.
- Implemented embeddings-based similarity matching and prompt-driven optimization flows to improve ATS alignment.
- Added guardrails requiring user review before content generation to preserve accuracy and prevent unsupported claims.

Education

Panjab University, Chandigarh

July 2019 – June 2023

Bachelor of Technology in Computer Science

Technical Skills

Languages: TypeScript, JavaScript, Python, Solidity, Go

Frontend: React, Next.js, Redux, Zustand, Material UI

Backend: Node.js, Express, FastAPI, REST APIs, JWT, OAuth, Firebase/Firestore

Web3 / DeFi: EVM & Solana smart contract integration, LayerZero V2, AAVE V2, Airswap, SIWE, ethers.js, wagmi, Hardhat, Anchor

Databases: PostgreSQL, MongoDB, TypeORM

Testing: Jest, Playwright, Hardhat, Zephyr Scale

DevOps: Docker, GitHub Actions, GCP

Engineering: API design, legacy refactoring, CI/CD, cross-chain architecture, performance optimization
